

Parallel & Perpendicular Lines

ANY LINE: $y = mx + b$
non-vertical

① slope

② a point on line

$$y = 2x - 3$$

① same slope

② different
y-int

What's line eq. for a

line parallel to $y = 2x - 3$
passing thru $(1, 2)$

$$y = 2x + b$$

$$\underline{2} = 2(\underline{1}) + b$$

$$b = 0$$

$$\{ \text{Final ans} = y = 2x$$

Final line eq. parallel to

$$y = 2x - 3$$

$$y = \frac{1}{7}x + 11$$

passing the pt $(7, 2)$

$$y = mx + b$$

$$y = \frac{3}{7}x + b$$

$$2 = \frac{3}{7}(7) + b$$

$$= \frac{21}{7} + b$$

$$2 = 3 + b \Rightarrow b = -1$$

$$y = \frac{3}{7}x - 1$$

Ans

Perp lines

$$y = 2x - 3$$

Given perp line passing
(4, 7)?

Perp lines - $y = mx + b$

~~Perpendicular~~

$$2m = -1$$

$$\rightarrow m = -\frac{1}{2}$$

$$y = -\frac{1}{2}x + b$$

$$7 = -\frac{1}{2}(4) + b$$

$$\Rightarrow b = 9$$

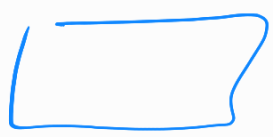

$$y = -\frac{1}{2}x + 9$$

Quiz next
Week

$$y = \frac{3}{2}x + 5$$

Find (1) line parallel to 
passing thru (20, 23)

(2) line perp. to 
passing thru (3, 5)

Eq $y = mx + b$
