

(Q1) Join college board class thing! } 15 MCCQ

stats ← spoken in probability ← set theory

Set: A collection of objects

Q: is there absolutely universal set?

A: Nope! Russell's paradox

$\{2, 4, 8\}$

"elements"
"individuals"

$\{x : x \text{ is even integer}\}$

"variable"

set of values

even

$$A = \{x : x \text{ is not in } A\}$$

context matters

this box
must exist
- Russell

Random Variable: A variable that is
random!!

- value of variable changes

Sample Space = {all possible
events to
happen}

↑

○

Random Variable : Domain is Ω
Image is \mathbb{R}

Example

Flip 2 coins:

$$\Omega = \{HH, HT, TH, TT\}$$

$X = \# \text{ of heads that comes}$ } random variable

$$X(\omega = HH) = 2$$

variable

$$X(\omega = HT) = 1$$

$$X(\omega = TH) = 1$$

$$X(\omega = \pi) = 0$$

① discrete

↑
integers

② continuous

↑
interval of
Reals

A, B are sets

$A \cup B =$ everything in A
 ↑
 or ~~in~~ in B
 Union

$A \cap B =$ everything in A
 and in B

↑
Intersection and $A \cap B$

$A^c =$ everything
not in A

$$A^c \cap B^c$$

$$(A \cap B)^c$$

$$A \cap (B \cup C)$$

Quantitative:

- discrete:
- dot plots
 - stem & leaf plots
 - frequency tables

cts

- continuous:
- histograms
 - cumulative dist. plots

Categorical

• pie chart

• bar graphs

• segmented bar graph

ppl who
